

HURON™ GOLD WEATHER UNIFORM ANORAK

The Huron™ Cold Weather Uniform Anorak was built using Polartec® Neoshell, an extremely lightweight, waterproof, breathable fabric. The Anorak itself was built in a quarter-zip design to allow for complete weather protection.

The hood can be cinched down in the front and back while donned. This provides protection from the elements without compromising your peripheral vision.

Two full length, 2-way zippers on both sides of the Anorak allow you to access your front panel or vent excess heat when needed. Additionally, the front of the jacket was designed to “roll and stow” providing unimpeded access to your kit. The stowing tab can be easily released when finished.

The entire Anorak is seam taped to provide both 100% waterproof and breathable protection.
