The Huron™ Breacher Front Waist Pack is designed to be carried in several different configurations depending on how you want to tailor your kit. The FWP002 can be used as a stand-alone waist pack, attached to your plate carrier, or run it off of a Gunfighter™ Belt while remaining modular and easily accessible. With the soft armor inserted, it upgrades your ballistic protection area and allows the operator to carry initiation systems and explosive cutting tape (ECT) on one platform.
